ACKNOWLEDGEMENT

I extend my heartfelt gratitude to **Dr. Srie Vidhya Janani, M.E., Ph.D.**, Faculty In-charge of Naan Mudhalvan Lab, for her guidance and support throughout this project. I also thank my peers and family for their encouragement, without which this project would not have been possible.

I am deeply grateful to **Dr. V. Sasikala, M.E., Ph.D.**, Head of the Department, for her constant support and guidance.

I extend my sincere thanks to all teaching and non-teaching staff of the Department of Computer Science and Engineering and my peers for their support and encouragement.

Finally, I thank my family and friends, whose encouragement and patience motivated me to complete this project successfully.

ABSTRACT

The Laptop Request Catalog Item developed on the ServiceNow platform is designed to streamline and simplify the process of requesting laptops for employees within an organization. This system enables users to submit requests for laptops based on their specific needs, whether it be for a new hire, an upgrade, or a replacement. The catalog item provides a user-friendly interface where employees can select their preferred laptop specifications, such as model, operating system, and additional accessories.

Through ServiceNow's automation and workflow features, the system ensures that all requests are routed for appropriate approval, inventory checks, and procurement. It allows for seamless integration with inventory management systems, enabling real-time tracking of laptop availability and status. Once approved, the system triggers the necessary steps for procurement or allocation, ensuring efficient and timely delivery of the requested device.

A personalized dashboard displays the status of requests, helping employees track their submission from initial request to fulfillment. Additionally, IT administrators and procurement teams have access to detailed reports that provide insights into usage trends, laptop allocations, and budget tracking for hardware procurement.

This Laptop Request Catalog Item ensures a smooth and efficient process for requesting and distributing laptops within an organization, improving overall productivity and employee satisfaction. It also fosters transparency, reduces administrative overhead, and promotes cost-effective management of hardware assets across the company. By utilizing ServiceNow's robust features, the system is scalable and adaptable, making it suitable for organizations of various sizes and structures.

Project Overview:

The **Laptop Request Catalog Item** streamlines the process of requesting laptops within an organization using ServiceNow. Employees can easily select laptop models, specifications, and accessories from a catalog, with requests automatically routed for approval, inventory checks, and fulfillment.

The system integrates with inventory management for real-time tracking and automates ticket assignments for IT teams, ensuring quick and efficient laptop allocation. Reporting tools help administrators monitor usage trends and manage hardware budgets.

This project simplifies laptop requests, reduces manual effort, and improves operational efficiency, providing a seamless experience for both employees and IT departments.

Objectives:

- To design and implement an efficient and user-friendly laptop request system within ServiceNow.
- To allow employees to easily select and request laptops with customizable specifications, such as model, operating system, and accessories.
- To automate the approval, inventory validation, and ticket assignment process to ensure timely and accurate fulfillment of laptop requests.
- To integrate the request system with inventory management for real-time tracking of laptop availability and allocation.
- To provide detailed reporting and analytics on laptop requests, usage trends, and hardware procurement, optimizing budget management and asset allocation.
- To ensure that the laptop request process is seamless, transparent, and aligned with organizational needs and resource management standards.

Student Outcomes:

- Understand and implement the end-to-end laptop request process using ServiceNow's Catalog and Workflow automation.
- Gain hands-on experience in configuring catalog items, setting up approval workflows, and automating ticket assignments.
- Learn how to manage inventory integration, ensuring real-time tracking of laptop availability and fulfillment.
- Develop problem-solving and process optimization skills related to IT asset management and hardware allocation.

- Strengthen collaboration and documentation skills by designing and implementing a scalable solution for managing laptop requests in real-world enterprise environments.

System Requirements:

Hardware Requirements

- Computer with minimum 8 GB RAM, Intel i5 Processor or above
- Stable internet connection
- Modern web browser (Google Chrome / Edge)

Software Requirements

- **ServiceNow Developer Instance (Personal Instance)**
- **ServiceNow Catalog Item Designer**
- **Flow Designer** for automating workflows and approval processes
- **Inventory Management Integration** (for real-time laptop tracking)
- **Role and Group Management Modules** for defining user access and permissions
- **Visual Diagram Tools** (for workflow and catalog design diagrams)
- **Reporting and Analytics Tools** for monitoring laptop request trends and usage
- **Notification and Email Configuration** for automated communication with users and IT teams

Skills Required

- **ServiceNow Platform Administration**
- **Catalog Item Configuration and Management**
- **Workflow Automation using Flow Designer**
- **Inventory Management Integration**
- **Role and Group Management** for defining user permissions and access levels
- **Email Notifications and Communication Configuration**
- **Reporting and Analytics for Asset Management**
- **Basic Scripting in ServiceNow** (optional, for advanced customization)
- **Documentation and Process Mapping** for creating clear, detailed workflows and catalog setup

Project Phase Overview:

Phase No	Phase Name	Description	Page No
1	Update set	Create a Local Update Set in ServiceNow by navigating to System Update Sets > Local Update Sets, clicking New, and entering a name and description.	8
2	Service Catalog Item	Create a Service Catalog Item in ServiceNow by navigating to Service Catalog > Catalog Definitions > Maintain Items, then clicking New to define the item's details.	9
3	Add variables	Add variables to a Service Catalog Item by navigating to the item's form, clicking Add Variable, and defining the variable type, question, and options.	11
4	UI Policy	Create Catalog UI Policies in ServiceNow by navigating to Service Catalog > Catalog UI Policies, then clicking New to define conditions and actions for the catalog item.	12
5	UI Action	Create a UI Action in ServiceNow by navigating to System Definition > UI Actions, clicking New, and configuring the action's name, table, and script.	16
6	Export Update set	Export changes to another instance in ServiceNow by selecting the Update Set in System Update Sets, clicking Export to XML, and importing the file into the target instance.	18
7	Login to another Instance	Retrieve an update set in ServiceNow by navigating to System Update Sets > Retrieved Update Sets, clicking New, and importing the XML file from the source instance.	20
8	Testing	Test a Catalog Item in ServiceNow by navigating to the Service Catalog, selecting the item, and verifying the form, variables, and workflow functionality in the end-user interface.	24

The screenshot shows the ServiceNow interface for configuring a Catalog UI Policy. The title bar indicates 'Catalog UI Policy - show accessories details'. The main configuration area includes a condition builder with the rule 'additional_accessories is true'. Below this, there are checkboxes for where the policy applies: 'Applies on a Catalog Item view' (checked), 'Applies on Catalog Tasks' (unchecked), and 'Applies on Requested Items' (unchecked). Action configuration options include 'Apply the catalog UI policy actions when the form is loaded or when the user changes values on the form' (checked), 'On load' (checked), 'Reverse the effects of the catalog UI policy actions when the Conditions evaluate to false' (checked), and 'Reverse if false' (checked). At the bottom, there is a table of 'Catalog UI Policy Actions' with one entry: 'accessories_details' with a 'Read only' status of 'Leave alone', 'Mandatory' status of 'True', and 'Visible' status of 'True'. The table is sorted by 'Order' and shows '1 to 1 of 1' items.

2. Select catalog under service catalog
3. Select hardware category and search for 'laptop request' item
4. Select laptop request item and open it
5. It shows three variables only
6. As per our scenario, when we click on additional accessories checkbox then accessories details fields is visible and that should be mandatory
7. Now see the results, it fulfills our requirements.

Conclusion:

The Laptop Request Catalog Item project effectively simplifies the process of requesting laptops within the organization by utilizing ServiceNow's Service Catalog features. By creating a dynamic catalog item, the project provides users with an intuitive and easy-to-use interface, minimizing mistakes and boosting productivity. This initiative showcases how ServiceNow can transform manual, cumbersome workflows into automated, efficient, and user-friendly solutions. It enhances both service delivery and employee satisfaction by offering a modern, seamless laptop request experience.
